

HAMMOUYA MERIEM

FULL-STACK DEVELOPER

0637435704

mer.ham@outlook.fr

France - Marseille

Being naturally curious, I have always been interested in digital technology and computer science. After earning my master's degree, I worked in various companies as a web developer. The diversity of my experiences has allowed me to learn several programming languages, such as PHP and JavaScript. I have also used associated frameworks and libraries like ReactJS, Symfony, Angular, and more

In the DevOps field, I have never had the opportunity to implement tools myself, but I know how to use many of them and am eager to learn more. Beyond technical expertise, I have developed numerous soft skills and ways to improve efficiency, quality, and teamwork.

After four years of employment, I now aspire to be independent, contribute to exciting projects, and further refine my technical expertise. If my profile matches your needs, feel free to contact me!

DEGREE

2021

Angular and Docker formation

Kaizen solution - Grenoble

2020

Master MIAHS - DCISS

UGA - Grenoble

2017

Bachelor of history

UGA - Grenoble

PROFESSIONAL EXPERIENCES

2023 - 2024

Full-stack developer

Zenride

Zenride is a French startup specializing in ecological transportation, particularly electric bikes. Our mission was to develop internal products to scale the startup, as well as external solutions for bike retailers and end customers.

As part of a team of six developers, I had the opportunity to strengthen my JavaScript skills and learn how to use ReactJS. I also collaborated with other teams to better understand their needs, their field, and to develop my teamwork skills

2021 - 2023

Full-stack developer

Kaizen solutions for EDF

Kaizen Solutions is an IT services company. During my time working with them, my mission was always with EDF, the historic electricity provider in France. Our main goal was to modernize the tools used in hydroelectric dams.

The challenge was to understand the needs, question existing processes, and develop products that were both durable and scalable. The diversity of projects allowed me to work with a wide range of languages, frameworks, and tools, including PHP, Laravel, Symfony, Angular, Sonar, Cucumber, and more.

2019 - 2021

Full-stack developer

Antilop

For my first professional experience, I worked at a startup specializing in digital solutions for retailers. We used an enhanced version of Prestashop with numerous custom hooks in native PHP.

One of the company's core values was the use of agile methodologies and knowledge-sharing with clients. The challenges we faced and the results we achieved convinced me of the usefulness of these approaches.
